Gladiolus Bulbs

Lilium Regale Bulbs

Peonies

Delphiniums

THE MODERN GLADIOLUS is beyond question the most wonderful, and one of the most beautiful flowers in existence, due to the extreme ease of culture and the lasting qualities of the flower.

Plant early in the Spring as soon as danger of heavy frost is over, placing the bulbs about 4 inches deep in good, well worked, mellow soil. By working into the soil some sheep manure or bone meal after planting the bulbs, the size and color of the bloom will be materially improved. No manure should come in contact with the bulb.

When the foliage begins to look rusty, which is 4 to 5 weeks after blooming, it is time to dig up the bulbs for winter storage. Lift the bulb carefully, immediately cut the top off close to bulb—thoroughly cure in sun or air, remove old bulb and bulblets at your leisure and store in reasonably dry cellar away from danger of freezing.

OUR TERMS are Cash; or 25% Cash, balance C. O. D.
All orders \$3.00 or more shipped prepaid.

WRITE for Special Prices on large quantities of planting stock and bulblets.

We are growing this year the two greatest hybrid strains of delphiniums in the world with color range covering every imaginable shade of blue and mauve with blue, black or white centers or bees.
